

# VALVERBE SOCIETÀ AGRICOLA COOPERATIVA

Via Prato, 9 – 12020 MELLE (CN)

## INTEGRATED COMPANY POLICY

Allegato C al manuale MSGI

VALVERBE SOCIETÀ' AGRICOLA COOPERATIVA produces organic herbal teas and aromatic herbs for cooking, organic bud derivatives and constitutional waters by processing medicinal plants and fruits from organic farming at its headquarters in MELLE (Cuneo). The company policy is built on 3 main strands:

**A) The promotion of SAFETY**

**B) The promotion of WORKERS' HEALTH.**

**C) The PROTECTION OF THE ENVIRONMENT and of BIODIVERSITY and PRODUCTION SUSTAINABILITY.**

The company's objectives are developed on the basis of these cornerstones which have always guided its growth.

The company undertakes to guarantee the protection of the health and safety of workers through the choice of premises, furnishings, machines, equipment, work procedures and protection systems suitable for the purpose.

The company undertakes to comply with the obligations of compliance with the applicable legislation (including standards and legislation, customer requirements and those defined internally), to apply the established prevention and protection measures and improve them - if possible - with self-monitor, maintenance and checks.

The company promotes the education, information and training of personnel on health and safety issues and in relation to the activities carried out and the equipment used.

The company undertakes to seek continuous improvement of the management system to increase its performance in relation to the health and safety aspects of workers through the assessment of impacts and risks, with the support of audits and periodic reviews.

From an environmental point of view, the company minimizes the "footprint" of its production cycle by operating exclusively according to the criteria of organic agriculture (as per CCPB 1749 certificate), without GMOs and with packaging produced with recycled, recyclable and compostable materials. The company has chosen to invest in the self-procurement of energy from renewable and sustainable sources by building photovoltaic systems with a peak power of 117 kW/h and purchasing the uncovered energy needs from sustainable sources certified by the national distribution network.

The company researches and practices circular economy processes such as vegetable composting, constitutional waters, pelletizing of powders produced by cutting herbs.
